GRENA TURF 8.3.3 is particularly suitable to trigger an increase in the retention capacity of nutrients for biological absorption.

The slow-release organic nitrogen present together with the natural presence of calcium (CaO) contributes to the resilience of plant tissues while also providing a corrective action to the pH of the soil.

The distinctive presence of amino acids, promote root proliferation by increasing the absorption capacity of nutrients. They also boost the assimilation of the NPK macro- and micro-elements present in the soil.

The balanced distribution of phosphorus and potassium makes GRENA TURF 8.3.3 an excellent product for lawn maintenance in the autumn-winter period. GRENA TURF 8.3.3 is available in micro pellets for a homogeneous distribution with low visual impact, ideal on ornamental lawns and sports fields.
